

Prater Oilfield Services, Inc. Expands Services

Prater Oilfield Services, Inc. is pleased to announce the expansion of oil field services with the addition of drill collars and changeover subs to its rental fleet. Prater Oilfield, serving operators in Kansas, Nebraska, Colorado, and Oklahoma, also provides mud pump/power-swivel services that utilize a triplex well service pump.

“ We use a triplex pump to decrease rig time and maximize efficiency while drilling” said **Justin Prater**, President, owner and operator. “We have found that our triplex pump outperforms duplex pumps during high pressure situations, such as tight hole applications, or when encountering heavy cuttings possibly caused by cave-in or fill-up from foreign formations”. With higher pressure capabilities, Prater Oilfield can also pressure test casing and assist in isolating a leak.

If you have a re-entry project, workover-completion drilling, or just need to circulate a hole clean, contact Justin Prater on cell at 785-432-0861, or Email at prateroil@ruraltel.net. Prater Oilfield Services is headquartered at 204-1/2 West Mill, in Plainville Kansas 67663.
